

2018/ 2019 Infrastructure Competition (Webinar 2)

TEXAS GENERAL
LAND OFFICE

AGENDA

- Identifying Project Service Area
- National Objectives
- Documenting Beneficiaries

Identifying Project Service Area

A project is defined as a discrete combination of:

- one entity (i.e., city or county),
- one activity (i.e., water, sewer, etc.),
- one project service area (beneficiary population)
- one HUD national objective.

A site is defined as a discrete location for the activity within a project. A project can have one or more sites.

Rango County Example

- Located in the City of Rango
- Flood and Drainage Improvement
- Johnson Neighborhood
- LMI National Objective

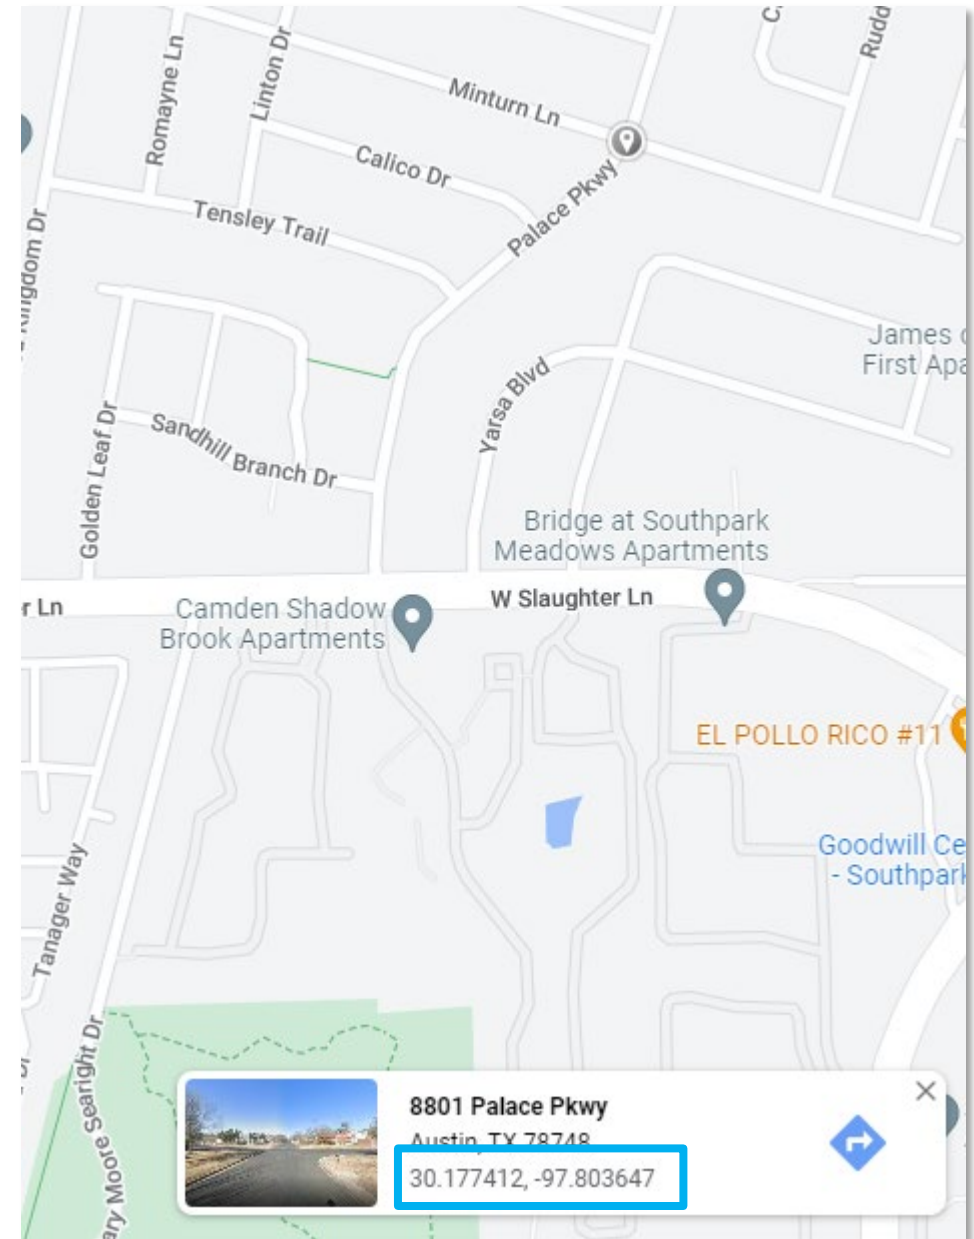

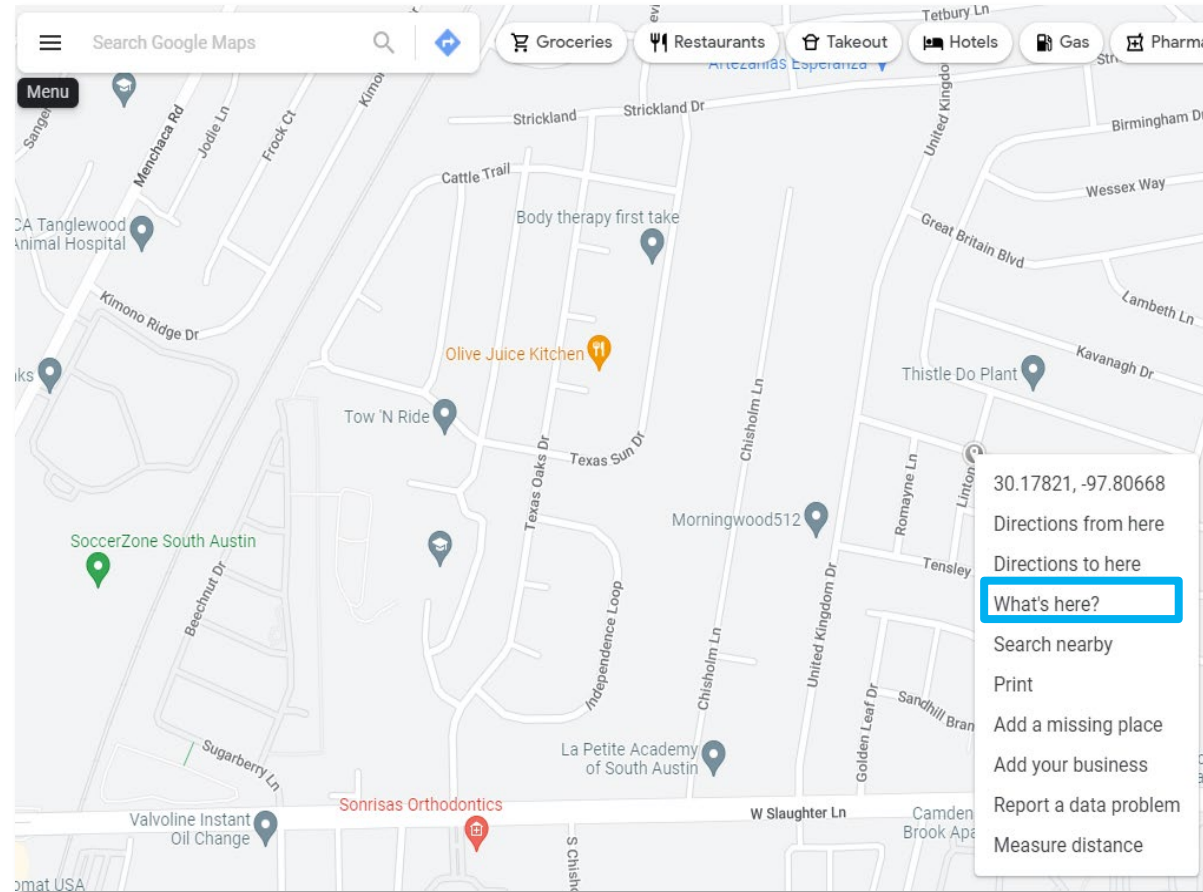

Identifying Project Service Area

5.4.4 Project Mapping

Maps must be provided for each project and/or site proposed in the application that clearly plot GPS coordinates and includes project/site numbers with any other necessary identifying information. Maps should be titled and/or numbered with the corresponding project title. GPS coordinates are required for each site. Latitude and longitude must be entered in Decimal Degrees (DD) to five decimal places (e.g., 0.00001).

Identifying Project Service Area

National Objectives

5.6.1.1 Area Benefit

- Projects, of which the benefits are available to all the residents in a particular area, where at least 51 percent of the residents are low- and moderate-income persons. The residents claimed as beneficiaries in the target area must be based on the entire area served by the project. A project that serves an area that is not primarily residential in character shall not qualify under the area benefit criterion.

5.6.1.2 Limited Clientele Benefit

- A low- and moderate-income (LMI) limited clientele project is a project that provides benefits to a specific group of persons rather than everyone in a defined service area. It may benefit particular persons without regard to the area in which they reside, or it may be a project that provides benefit on an area basis but only to a specific group of persons who reside in the area. In either case, at least 51 percent of the beneficiaries of the project must be LMI. Due to certain statutory limitations, the regulations preclude various activities from qualifying under this subcategory, so contact the GLO to see if limited clientele is applicable.

5.6.1.3 Direct Benefit

- For applicants using CDBG-DR surveys to establish benefit, all forms (survey questionnaires, survey tabulation form(s), and the survey locations form(s)) must be submitted with the application for GLO verification.

Documenting Beneficiaries

5.6.2 Beneficiary Identification Methods

A project that addresses the national objective of principally benefitting low- and moderate-income persons must provide documentation as to the income status of those persons (also called beneficiaries).

Low- and moderate-income individuals are those whose income is 80 percent or less of the area median family income (AMFI). Clear documentation of an applicant's beneficiary identification method must be received with the application. Incomplete beneficiary documentation could render an application incomplete and ineligible.

The basis for determining which residents are to be considered as beneficiaries of a proposed project can be achieved through the use of current LMISD information, or by conducting a survey of the area with approved CDBG-DR forms. Applications for the 2018 South Texas Floods Infrastructure Competition and the 2019 Disasters Infrastructure Competition must use currently available CDBG LMISD.

Documenting Beneficiaries

- ❑ Census data should be used to the maximum extent feasible for determining the income of persons residing in service areas; therefore,
 - the boundaries of the service area determined by the applicant for the project need to be compared with the boundaries of census divisions (tracts, block groups, etc.).

- ❑ The census divisions that best fall within the service area should be used for documenting the percentage of low- and moderate-income persons residing in that area.
 - HUD-based LMISD spreadsheets are used to document this beneficiary information.

Applicants must submit the most current LMISD available at the time of application.

Documenting Beneficiaries

Refer to the GLO recovery website for details regarding the required Survey Methodology and all associated forms.

- Applicants using CDBG-DR surveys to identify beneficiaries should tabulate race, gender, and ethnicity data. Applicants must also identify the survey dates and number of households benefitting.
- Survey forms must be complete, dated, and signed by the surveyor.
- Incomplete surveys could render the application incomplete and ineligible.
- Provide an explanation for the use of Surveys, as opposed to LMISD data

Documenting Beneficiaries

Race/Ethnicity/Gender and Census Geographic Area Data:

The race, ethnicity, and gender for the total beneficiaries claimed for the proposed project must be tabulated and provided.

Applicants must list all census tracts and block groups benefitting from the project when using census data.

Appropriate census maps are required for data verification.

Documenting Beneficiaries

Maps must clearly show:

- Boundaries of the city, county;
- Locations of the service area community or communities within the city, county; and
- Locations of all proposed project sites per activity within the service area (e.g., sewer/water lines, lift stations, street improvements, water storage tanks, wastewater treatment plants etc.)
- Identifiable features such as named streets, railroads, streams, etc.
- Legible labels of all applicable census geographic areas (e.g., census tracts, block groups).

Documenting Beneficiaries

Applicants using CDBG-DR surveys to document project beneficiaries must provide maps which clearly show:

- All the street names where surveys were used to document project beneficiary locations of the project activities on the same map;
- Legend on the map that identifies the residences surveyed; and
- Proposed project service area(s) and survey area(s) clearly identified

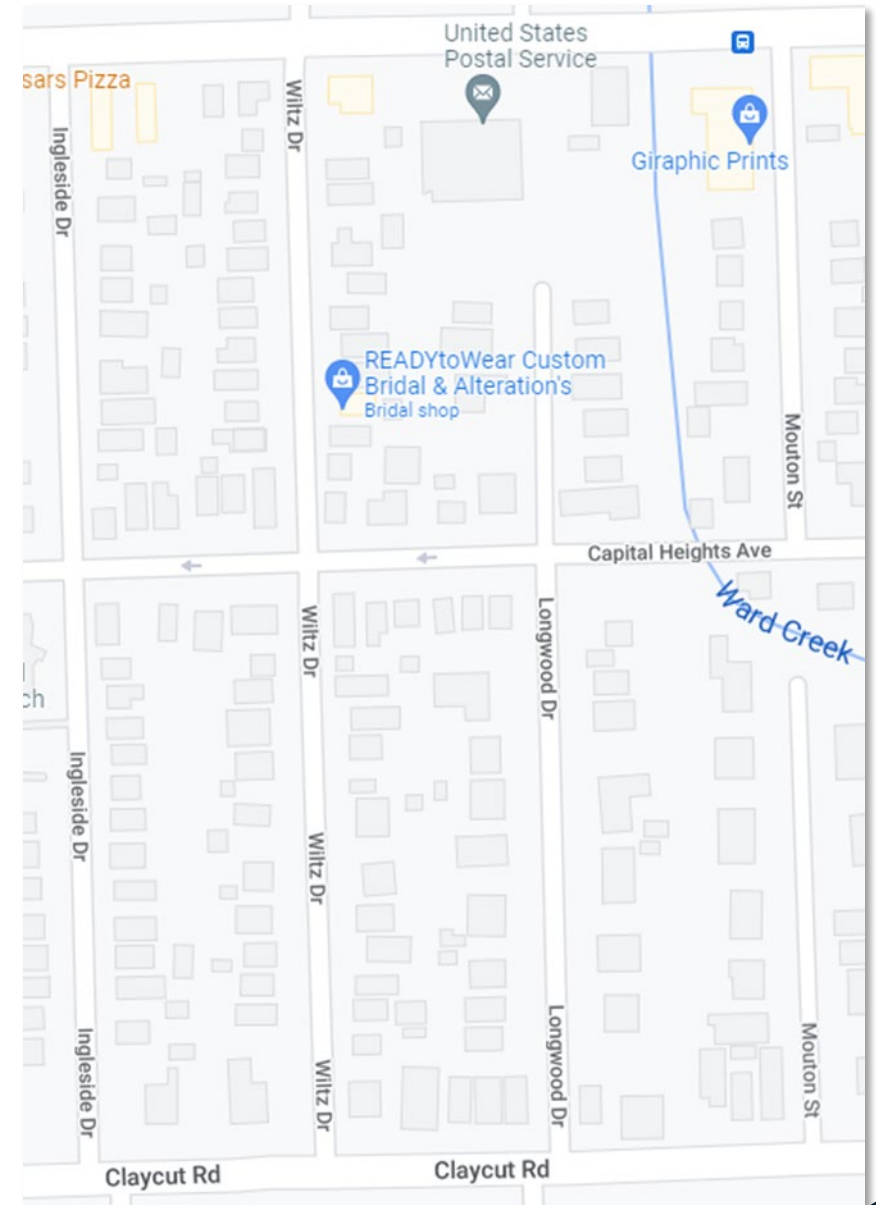

Documenting Beneficiaries

- ❑ Map locations of all proposed project activities should match the description of the locations provided.
- ❑ If project beneficiaries are determined on the basis of area benefit, the project service area (the area where the residents benefitting from the project live, which may or may not correspond exactly to the physical project site(s)) must also be clearly delineated on the map.
- ❑ The applicant is required to use maps based on one of the three following options:
 - GIS and/or AutoCAD maps produced by the grantee or its designee (e.g., grant administrator or engineer). Electronic files of maps produced through GIS or AutoCAD should also be submitted with the application.
 - Census Bureau maps based on entire cities or census designated places (CDPs); or
 - Another comparable map format.

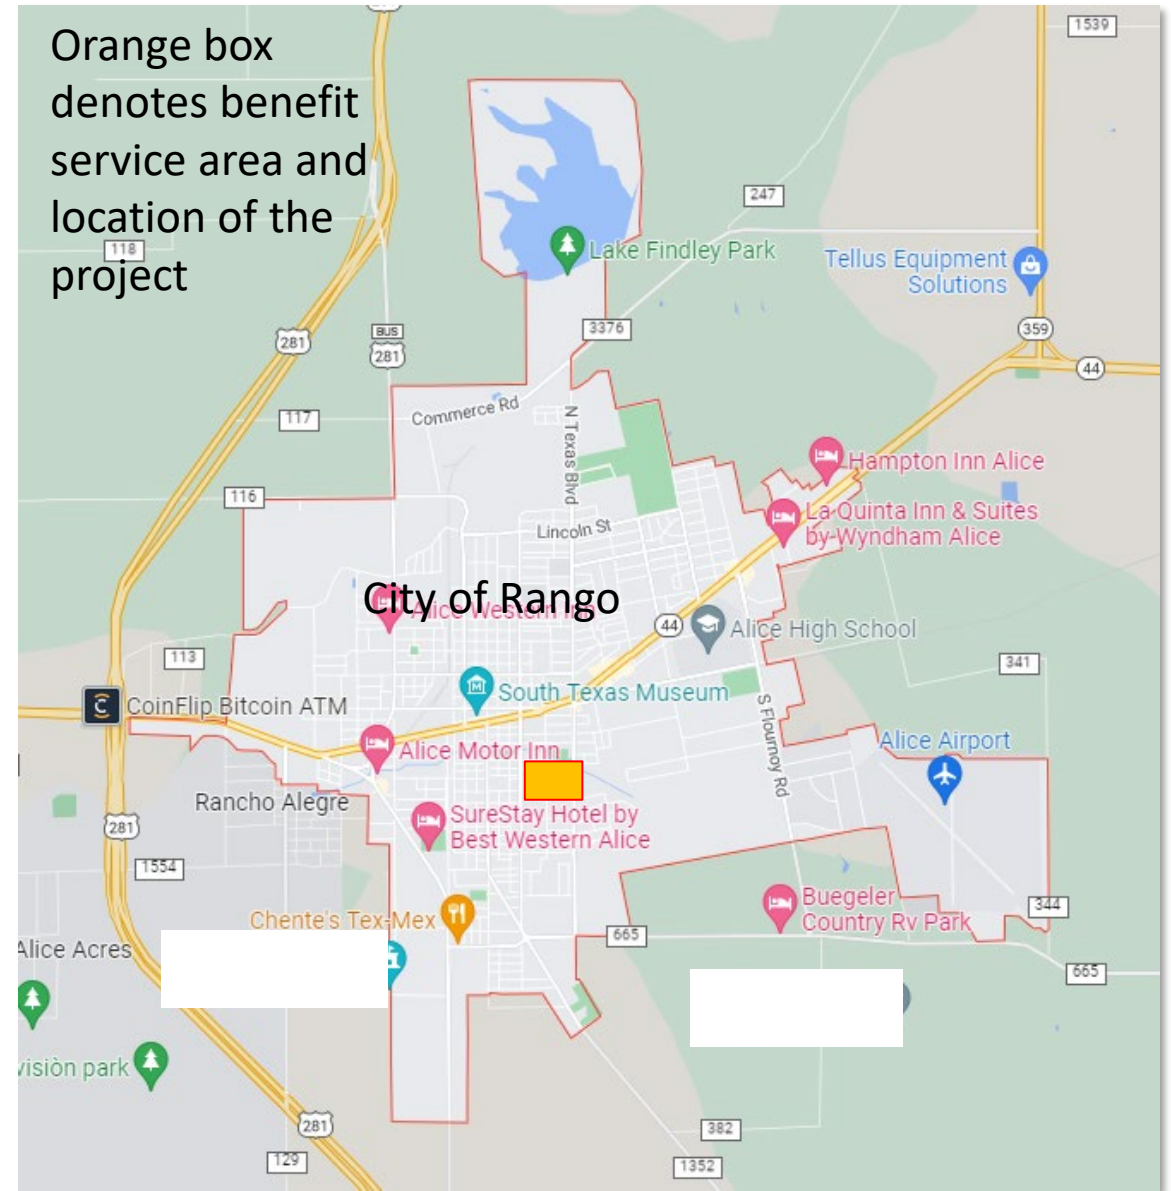

Identifying Project Service Area

Example: Rango County wishes to re-shape existing drainage culverts along side roads for approximately 4,300 LF within Johnson Neighborhood

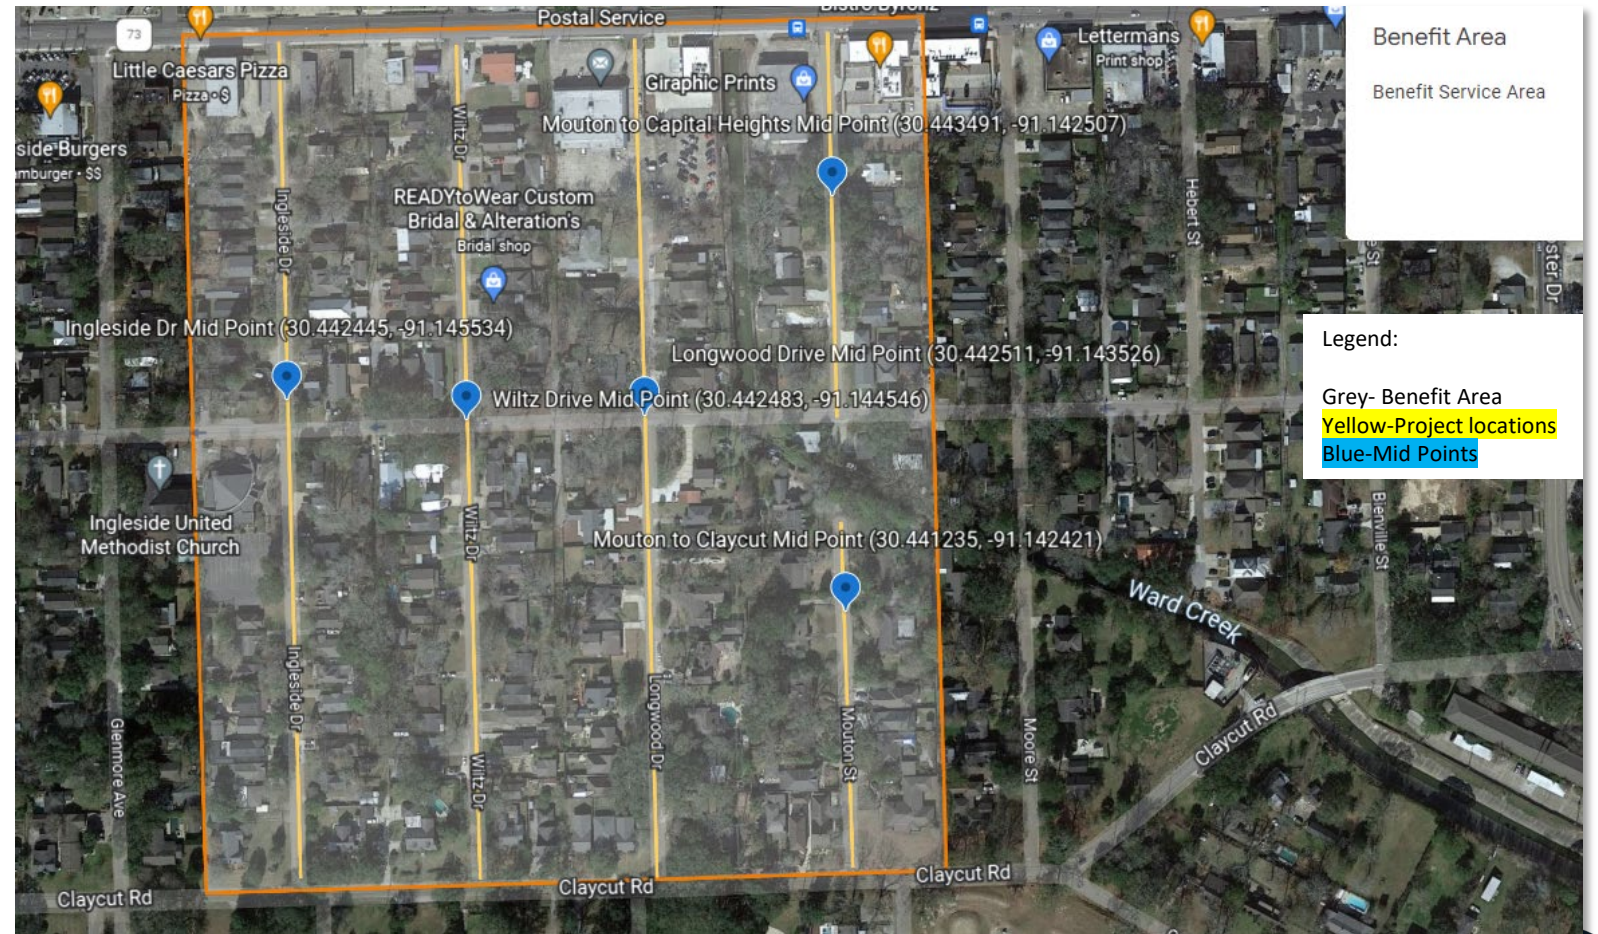

Identifying Project Service Area

With any map included in the application it is important to include a map showing the city or county limits, indicating the location of the project, and benefit service area.

Identifying Project Service Area

A map should also be submitted showing the benefit service area of the proposed project

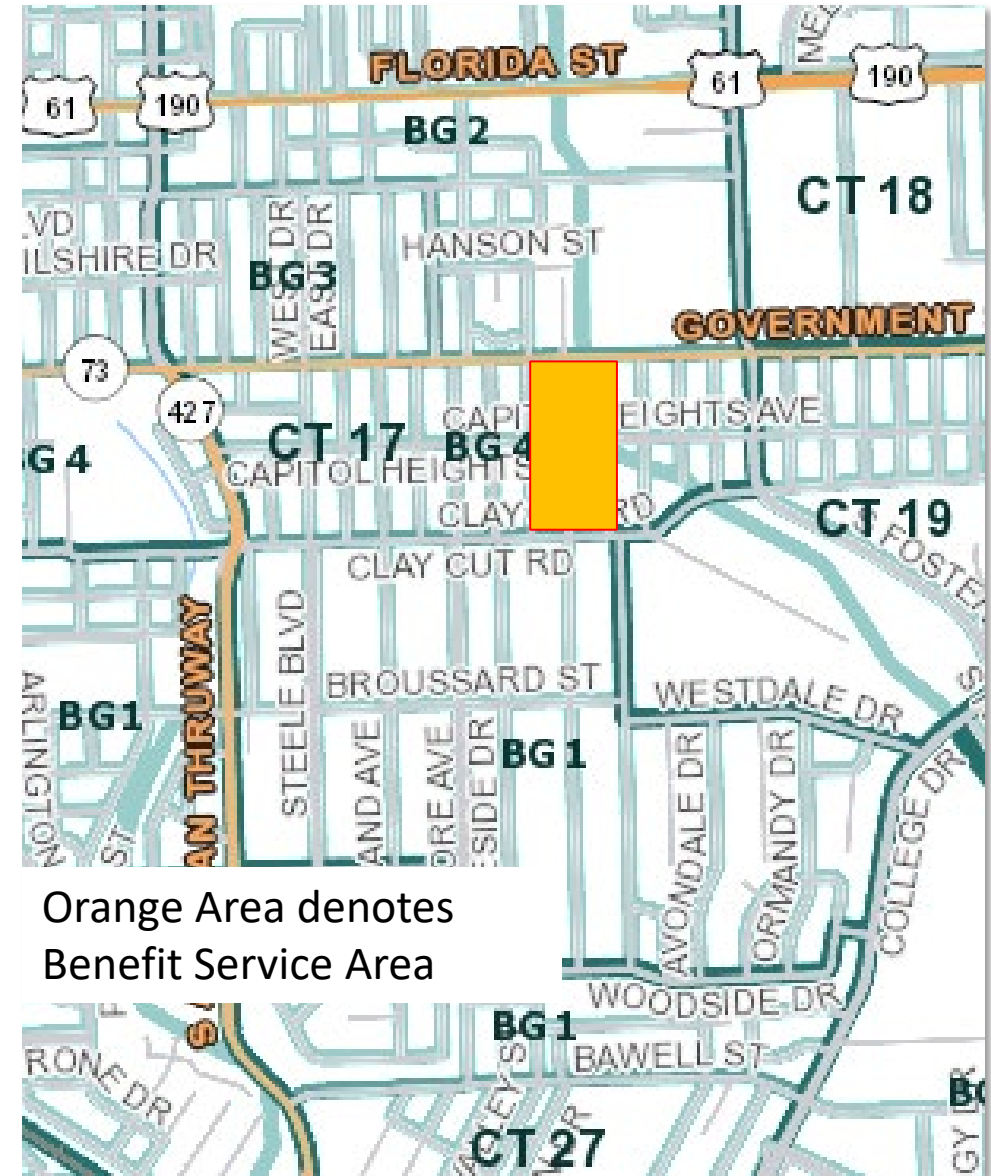

Identifying Project Service Area

A map should also be submitted showing the benefit service area of the proposed project and how it relates to the Census Tract and Block Groups

To access Census Tract information, you may visit:

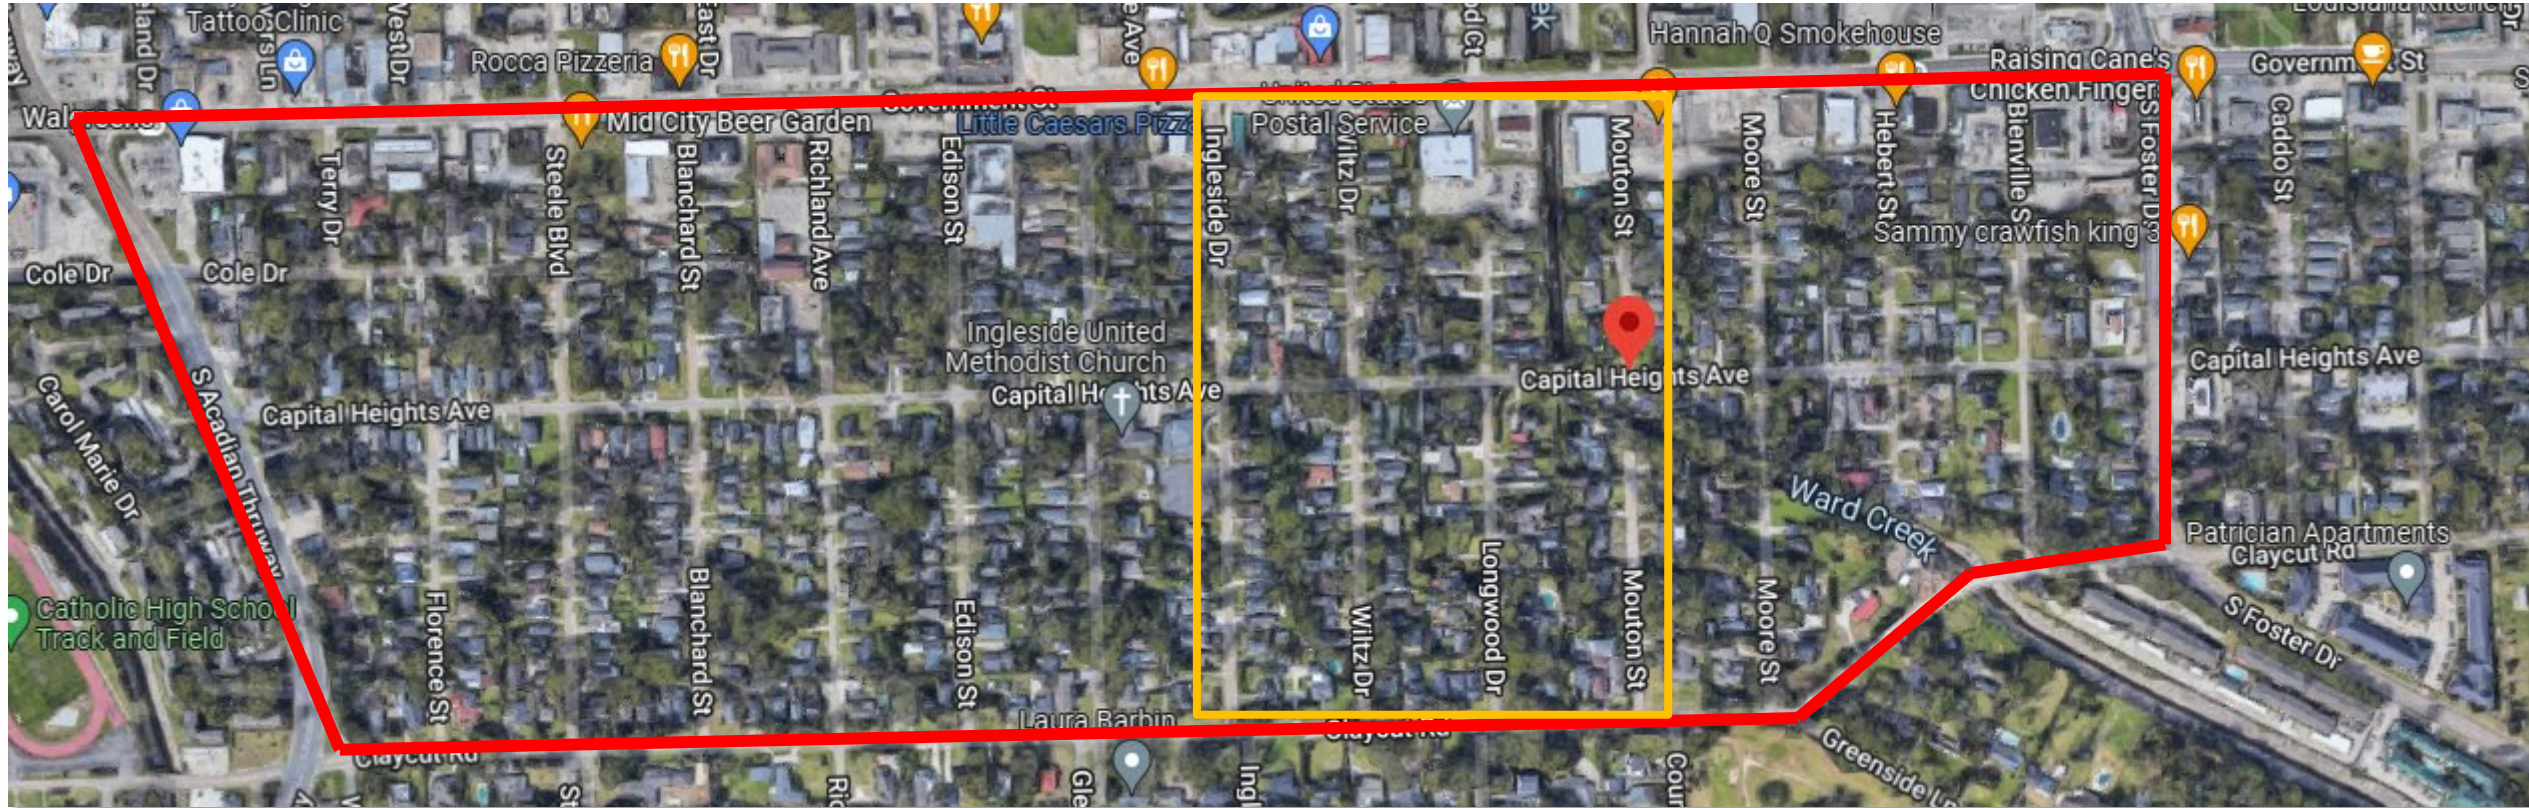

<https://tigerweb.geo.census.gov/tigerweb/>

Orange Area denotes Benefit Service Area

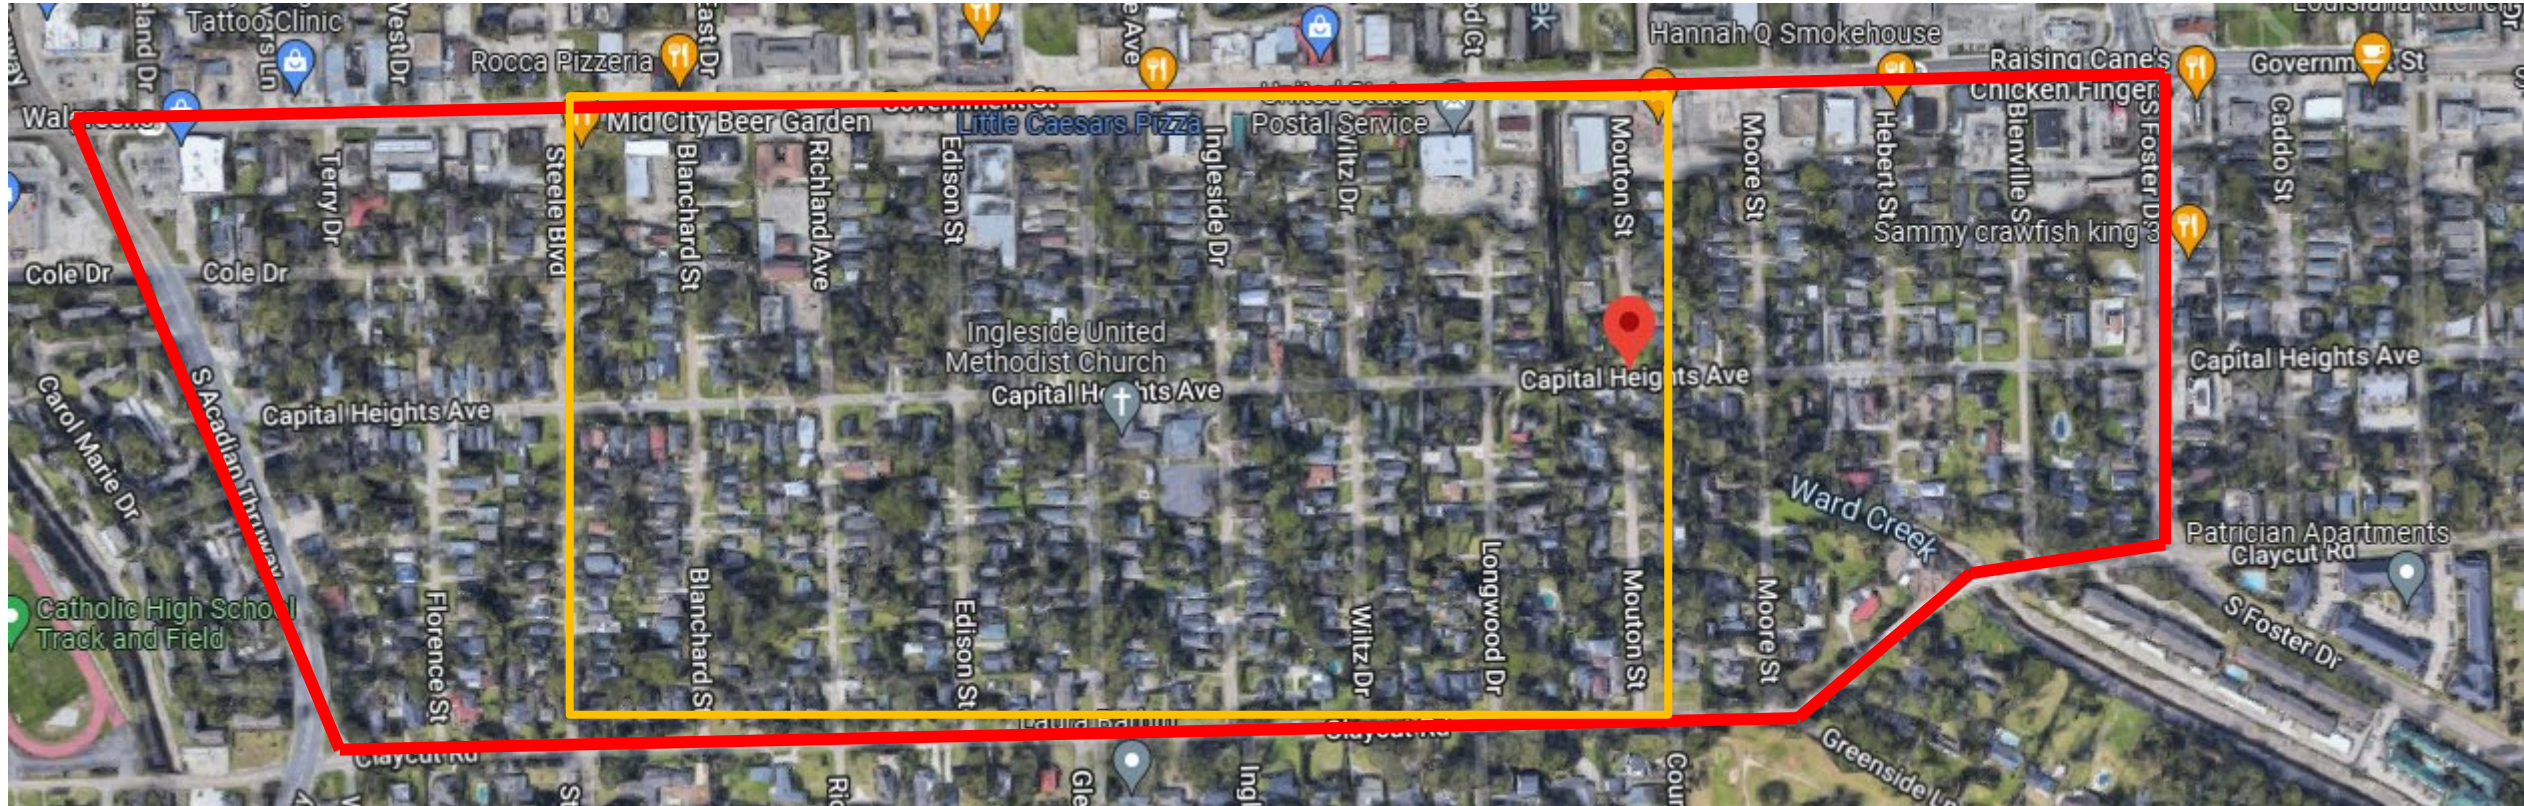

Identifying Project Service Area

geoname	Tract	Blckgrp	Lowmod	Lowmod univ	Lowmod _pct

Identifying Project Service Area

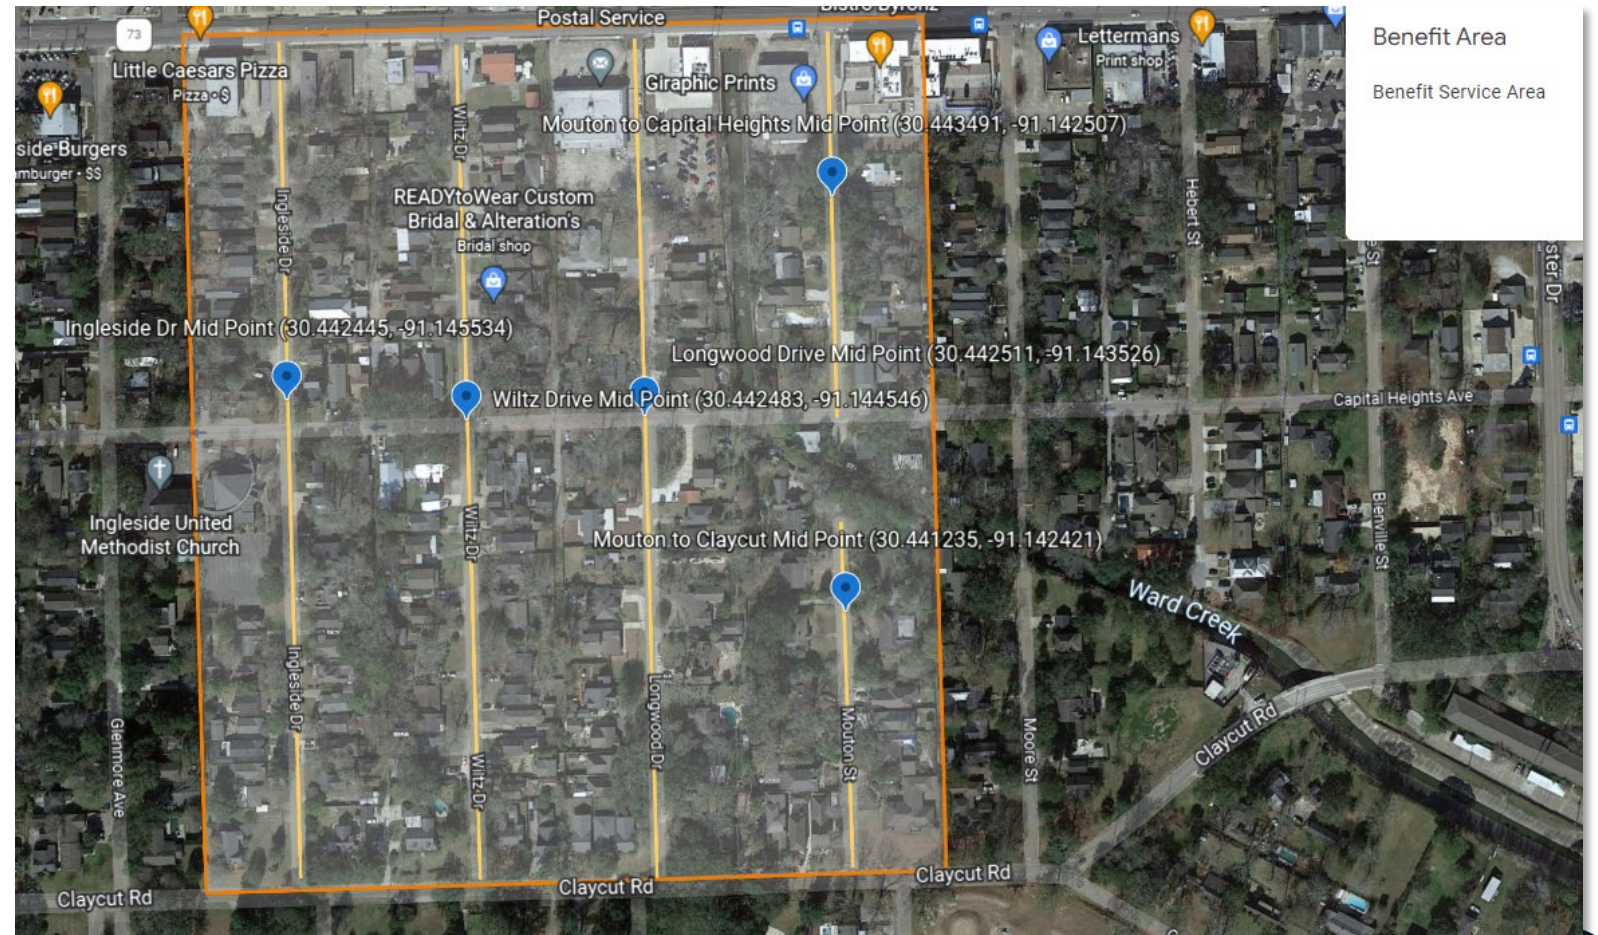

geoname	Tract	Blckgrp	Lowmod	Lowmod univ	Lowmod _pct
Block Group 4, Census Tract 17, Rango County, Texas	17.00	4	753	1150	65.47%

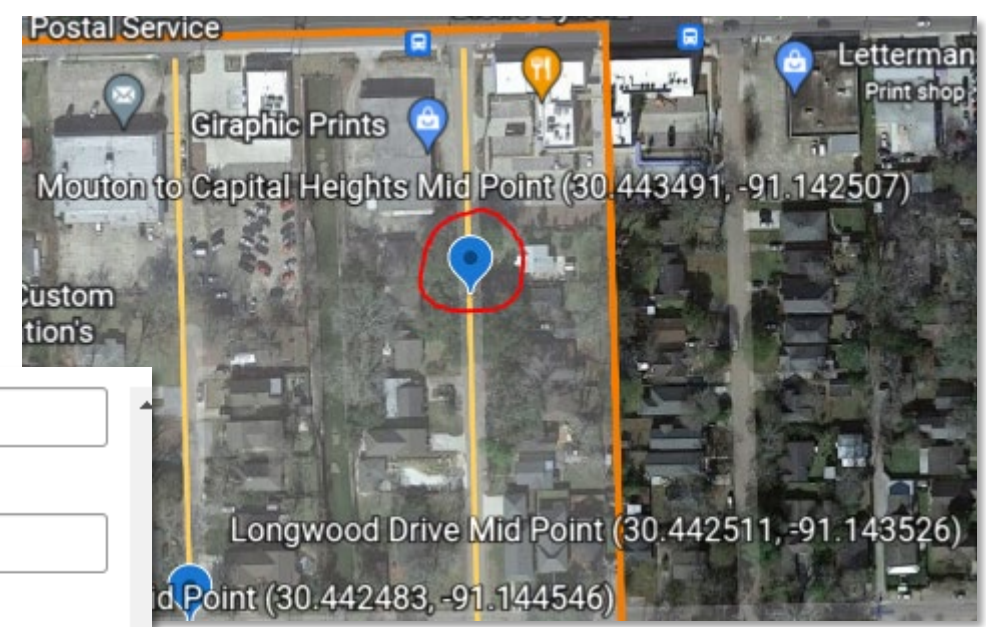

Identifying Project Service Area

A map should also be submitted showing proposed work to include the latitude and longitude for mid-points of each run of the project.

For public facilities latitude and longitude will be required to denote its location in decimal degrees.

Documenting Beneficiaries

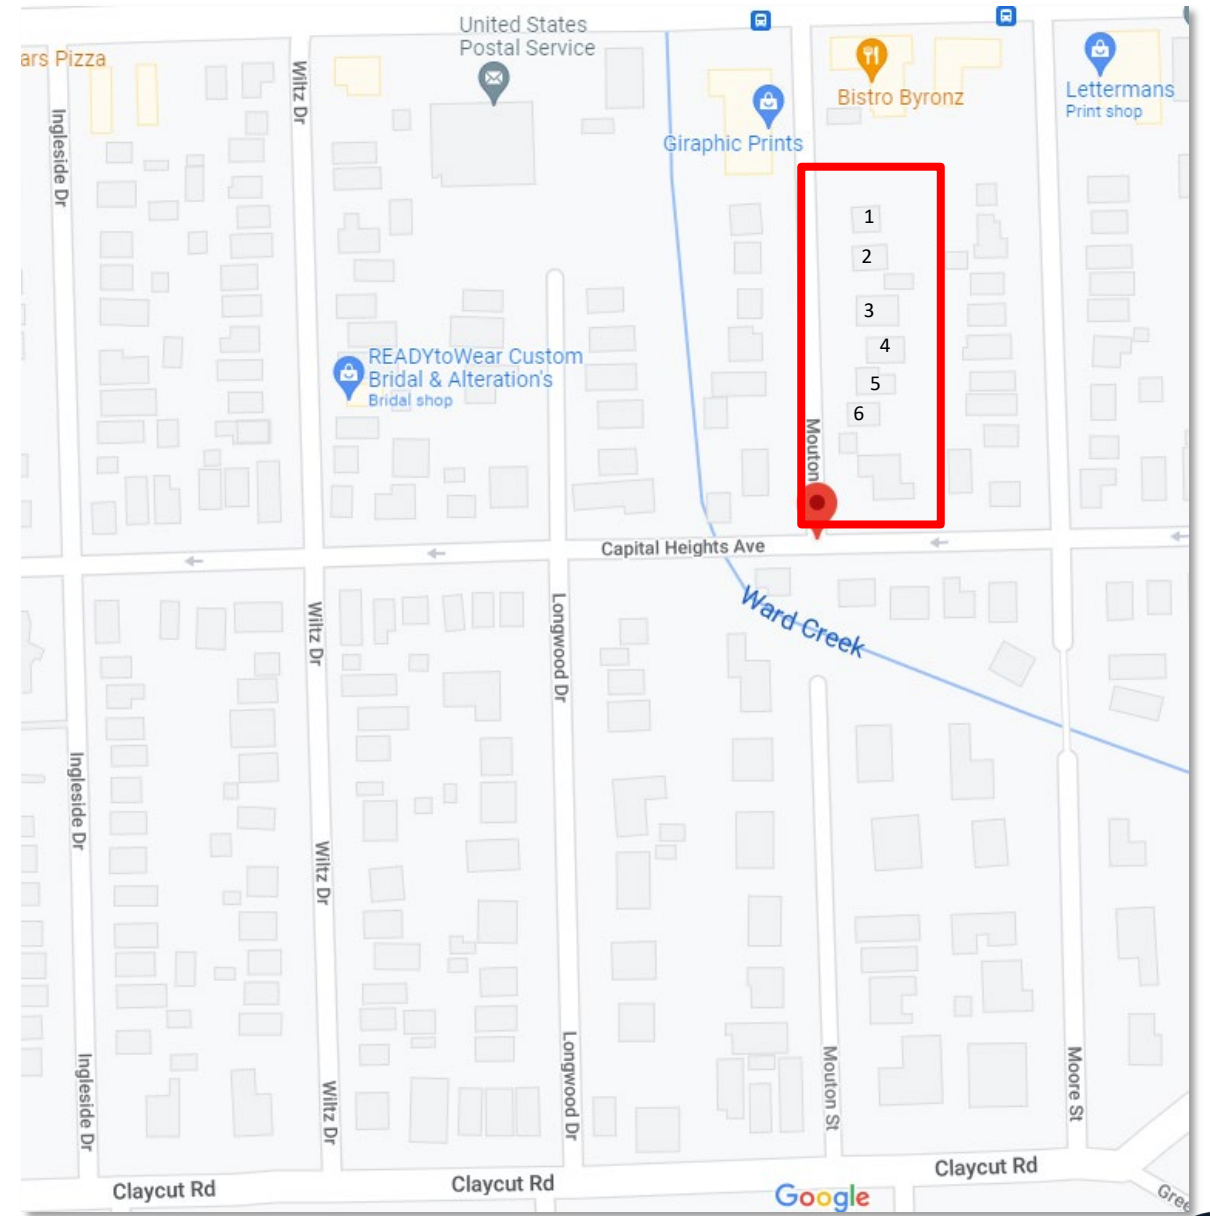

Documenting Beneficiaries

Surveys benefitting **200 or fewer** households must:

- perform a 100% effort of 100% of benefitting households
- demonstrate a minimum 80% response rate.

Surveys benefitting **200 or more** households

- MAY utilize the "random sample methodology" as outlined in Steps 6-11 of the GLO Survey Methodology, **OR**
- perform a 100% effort of 100% benefitting households with an 80% response rate.

Documenting Beneficiaries

Using the DP05 tool the user may filter the results on various geographies.

The screenshot displays the American Community Survey DP05 tool interface. The main header reads "American Community Survey DP05 | ACS DEMOGRAPHIC AND HOUSING ESTIMATES" and "2020: ACS 5-Year Estimates Data Profiles". A toolbar includes icons for Notes, Geos, Years, Topics, Surveys, Codes, Hide, Transpose, Margin of Error, Restore, Excel, CSV, ZIP, Print, and Map. A "Select Geography" dialog box is open, showing options for "Geographic Entities" and "Summary Levels". A message states: "Available filters are limited by your chosen result in combination with selected filters. Some filters may be unavailable." Below this, a section titled "Most Commonly Used Geographies" is highlighted with a blue box, containing buttons for Nation, State, County, Place, Zip Code Tabulation Area, Metropolitan Statistical Area, Tract, Block, and Block Group. Underneath, "All Other Geographies" includes 5-Digit Zip Code, Alaska Native Regional Corporation, American Housing Survey Area, and American Indian Area (Off-Reservation Trust Land Only)/Hawaiian Home Land. The background shows a table with columns for "Label" and "Percent".

Documenting Beneficiaries

Rango County selected Census Tract 17 as this is the tract being served and exports to excel.

A screenshot of the American Community Survey data tool interface. The top navigation bar includes 'American Community Survey', 'DP05 | ACS DEMOGRAPHIC AND HOUSING ESTIMATES', and '2020: ACS 5-Year Estimates Data Profiles'. A toolbar contains icons for Notes, Geo, Years, Topics, Surveys, Codes, Hide, Transpose, Margin of Error, Restore, Excel, CSV, ZIP, Print, and Map. The main content area shows a breadcrumb trail: 'Tract / Louisiana / East Baton Rouge Parish, Louisiana / Select Tract'. Below this is a section for 'Within other geographies' with a list of filters. The filter 'Census Tract 17, Rango County' is checked, while 'All Census Tracts within Rango County' is unchecked. An information message states: 'Available filters are limited by your chosen result in combination with selected filters. Some filters may be unavailable.'

Documenting Beneficiaries

For 100% surveys, the documents must be submitted in the following order:

1. Survey Tabulation Form;
2. Survey List;
3. Map indicative of households surveyed overlaid with the corresponding project service area
4. Survey Questionnaires (these Survey Questionnaires must be submitted in the same order as indicated on the survey list.);
5. Survey Questionnaires of Vacant Households/Units and Non-Responsive Households.

Documenting Beneficiaries

LMI

Principally benefit low- and moderate-income persons. (To qualify an application activity under the national objective of principally benefitting low- and moderate-income (LMI) persons, at least fifty-one percent (51%) of the beneficiaries of the activity must be LMI.)

Yes

Describe activities benefit to low - to - moderate income people.

The proposed flood and drainage improvements will benefit the individuals residing on Johnson Neighborhood to alleviate future flooding events. A survey was conducted and the outcome of the survey arrived at 297 persons of which 198 were considered LMI, or 66.67%

Method(s) used to determine the beneficiaries

- LMI Area Benefit
- LMI Housing Activity
- LMB Buyout
- LMH Down Payment Assistance
- LMH Housing Benefit
- LMHI Housing Incentive
- LMI Limited Clientele
- LMI Jobs

Documenting Beneficiaries

Beneficiary Information

What method was used for Beneficiary Identification? *

Surveys

Beneficiary Identification Provide a brief description of the beneficiary identification method used to determine this national objective and upload supporting beneficiary maps, census data, and/or survey documents. Failure to upload supporting beneficiary data could result in disqualification of competition applicants. *

The County reviewed the project benefit service area and concluded that while the project falls in Census tract 17 and Block Group 4, a LMI Block Group, not a significant portion of the Block Group will be served. LMISD was reviewed to ensure the potential outcome of the survey would result in an LMI project

Provide an explanation for the use of surveys, as opposed to LMISD data.

A survey was conducted due to the fact that not a significant portion of Census Tract 17 Block Group 4 was to be served by the proposed flood improvements.

Provide dates when surveying was started and completed. Attach spreadsheet with with survey results.
